

Git Tuto

1 Open Git Bash inside your project

Go to the folder **squelette** on your PC, then:

- Right click → **Open Git Bash here**

Or in Git Bash:

```
cd path/to/GRecrutement
```

2 Check if it's already a git repository

Run:

```
git status
```

- If you see something like `On branch ...` →  repo already initialized
- If not, initialize it:

```
git init
```

3 Make sure your branch is called `main`

Check current branch:

```
git branch
```

If it's `master` (or anything else), rename it to `main` :

```
git branch -M gestion-du-Recrutement
```

4 Add the GitHub remote (if not already added)

Copy your GitHub repo URL (HTTPS or SSH), then:

```
git remote add origin https://github.com/S3adlly/Carrieri.git
```

Check it:

```
git remote -v
```

5 Add files to staging

```
git add
```

6 Commit your changes

```
git commit -m "Initial commit"
```

7 Push to the **main** branch on GitHub

```
git push -u origin gestion-du-Recrutement --force
```

- **u** links your local branch to GitHub's gestion-du-Recrutement
- Next time you can just use **git push**
